

AN OVERVIEW OF THE GROWTH PROCESS IN INDIA 2006-11

A snapshot of India's population: India, with 1.19 billion people is the second most populous country in the world. The figures show that India represents almost 18% of the

world's population, which means that one out of six people on this planet live in India. India is all set to take the numero uno position by 2030.

More than 50% of India's current population is below the age of 25. A little more than 70% of India's population lives in villages and the rest in towns and urban agglomerations. The literacy rate of India as per the 2001 Population Census is 65.38%, with male literacy at 75.96% and female at 54.28%. Kerala has the highest literacy rate at 90.86%, Mizoram (88.80%) is the second and Lakshadweep (86.66%) is third. The gender ratio of India stands at 933 females for 1000 males. Kerala with 1058 females per 1000 males is the state with the highest female sex ratio and. Haryana with 861 has the lowest female sex ratio.

India also has the distinction of having the largest Baha'i community in the world - a reality that reflects the important position India holds within the world wide Baha'i community. Close to 40% of the global Baha'i population is to be found within the borders of this South Asian nation alone.

While the number of clusters that launched intensive programs of growth during the first Five Year Plan (2001-2006) was 43, this number rose by another 125 during the

second Five Year Plan (2006-2011), a three fold increase. The total number of advanced clusters in India today is 168. This achievement was possible mainly because of the focus given on strengthening the institute

"The coherence thus achieved through the establishment of study circles, devotional meetings and children's classes provides the initial impulse for growth in a cluster, an impulse that gathers strength as these

process all over India. These clusters benefitted from the learning and experience of established communities and from the increased flow of resource persons and visiting tutors. Efforts were made to increase collaboration between members of cluster agencies and institutions and the unity of thought and action that emerged from reflection meetings and other occasional cluster level gatherings, will hopefully gain momentum in the coming months. While this increased collaboration among agencies will continue to remain a priority, ensuring the active involvement of Local Spiritual Assemblies in the growth process will also need focused attention. Members of Councils are now learning to accompany agencies in their regions. Members of several State/Regional Baha'i Councils are ensuring their own active involvement in the growth process, providing much needed encouragement to the believers and institutions in the cluster, thereby creating an atmosphere conducive to mutual support and learning.

INDIA PROFILE

India has an estimated Baha'i population of about 1.6 million believers, details of 9% of which have so far been entered into the Statistical Report Program. The country has been divided into 1975 clusters of which 168 have launched intensive programs of growth.

Overview of the Junior Youth Spiritual Empowerment Process

This final year of the second Five Year Plan witnessed the establishment of junior youth spiritual empowerment programs throughout the country in increasing numbers. (A more detailed analysis of the successes and challenges that this programme has seen are provided elsewhere in the Annual Report). As of current information available, there are one thousand two hundred and ninety two junior youth groups with over thirteen thousand junior youth participating in them. At the beginning of the current Plan (April 2006), there were only 192 junior youth groups with less than one thousand participants. At the beginning of this Plan, the number of animators was just over five hundred and this number has now risen to two thousand. The learning sites established in selected areas are also lending support

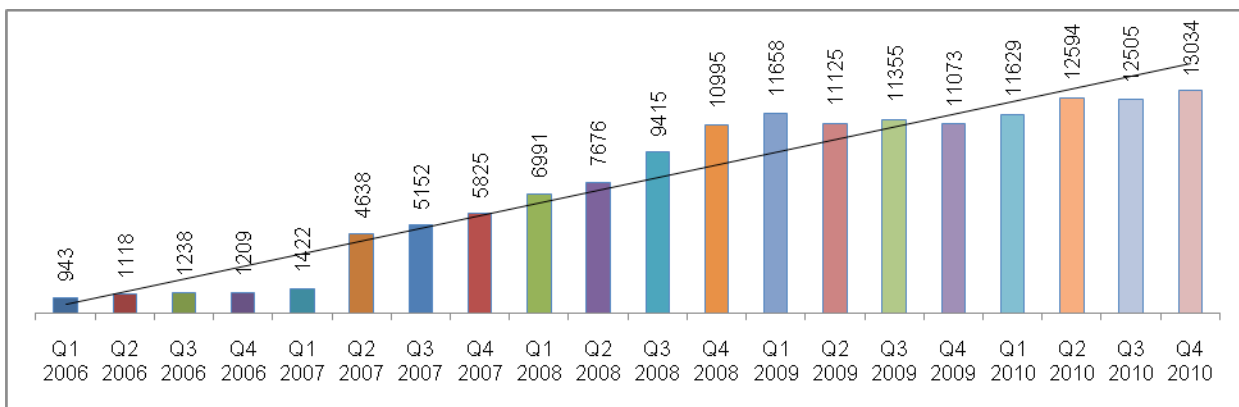

and providing impetus to this programme by providing necessary field opportunities to the friends before they actually begin their own junior youth group.

1178 junior youth groups are being held in 153 advanced clusters, while 88 junior youth groups are held in other clusters. Of the total junior youth participating, 22% have Baha'i parents, while the remaining 78% are from the wider society. The following graphs show the steady increase in the activity of junior youth groups in India since the beginning of the current Plan.

NUMBER OF JUNIOR YOUTH GROUPS

ATTENDANCE IN JUNIOR YOUTH GROUPS

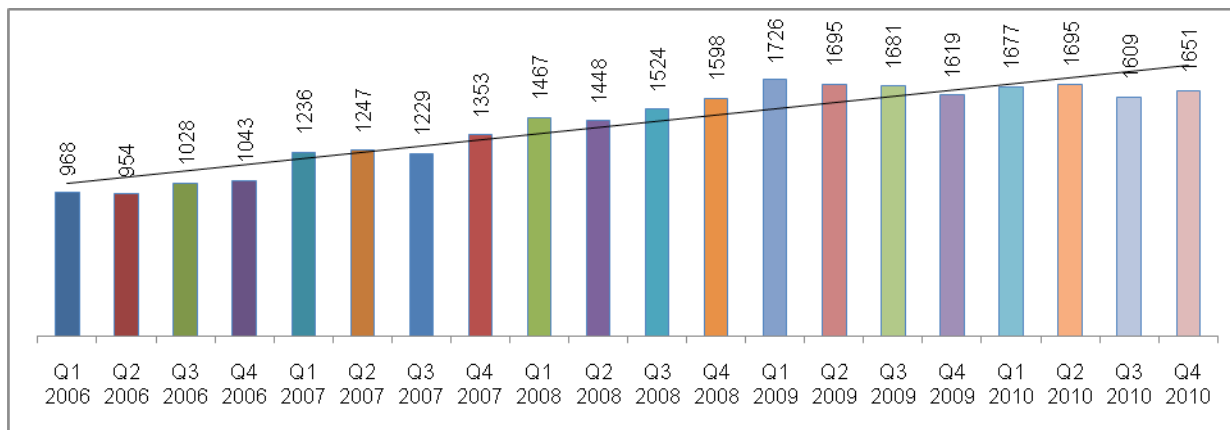

Overview of Baha'i Classes for Children

Similarly, Baha'i classes for children are also taking firm root because of increased support from parents. They appreciate the noticeable difference in their children and often come forward not only to render their support for the continuity and multiplication of this activity but also to offer suggestions to further improve the efforts of the Baha'i teachers. Of course, the training institute continues to generate the necessary human resources for the multiplication of this activity. While the number of trained teachers of Baha'i classes for children was just over 8000 at the beginning of the current Five Year Plan, this number doubled well before the end of the Plan, reaching close to 17000. Currently there are more than 1600 children's classes with 18000 children, a majority of whom are from the wider society. Attracting a large number of parents from the wider society, the agencies concerned regularly organize "*balmelas*" (children's fairs), a platform where children are able to demonstrate their newly developed abilities and capacities through a variety of cultural activities. These "*balmelas*" are becoming a regular

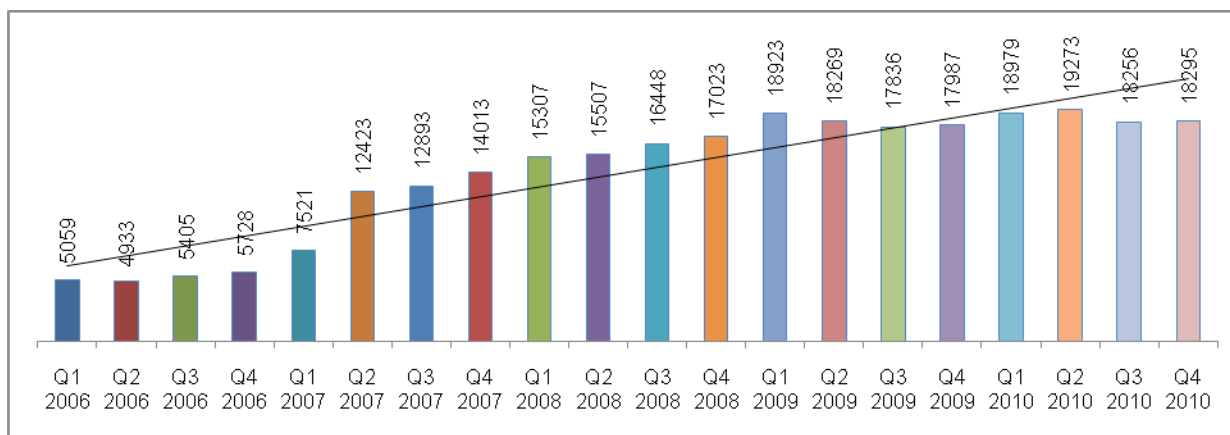

feature of the ongoing Baha'i children classes. Involvement of parents in these gatherings of children is crucial and their support in the sustainability of this activity is essential to its strengthening.

Currently, 1516 classes are held in one hundred and sixty three advanced clusters while another 135 classes are held in fifty other clusters. Of the total participants, 22% are children of Baha'i parents while the remaining 78% are from the wider society. The following two graphs show the development of Baha'i classes for children in India in terms of number and attendance during the second Five Year Plan:

NUMBER OF BAHAI CHILDREN CLASSES

ATTENDANCE IN BAHAI CHILDREN CLASSES

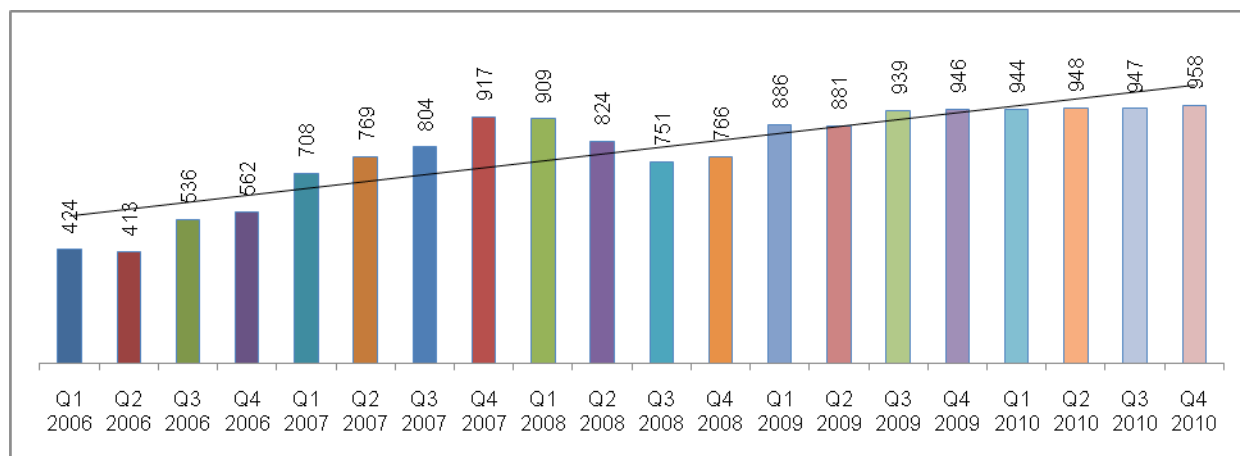

Overview of study circles

A sustained multiplication of study circles still remains a challenge for the Indian community. However, the learning being generated thanks to a wave of institute seminars being conducted across India will, in due course, address this matter. The immediate concern is the timely completion of study circles and the emphasis that is being placed on the act of service associated with each. It is this sequence of courses that provide the flow and development of human resources and levels of enthusiasm and the creation of an atmosphere conducive to the study and practice are areas where more attention will be required in the months ahead. Though the number of individuals who completed the sequence of courses doubled during the current Five Year Plan, this did not result in a commensurate increase of study

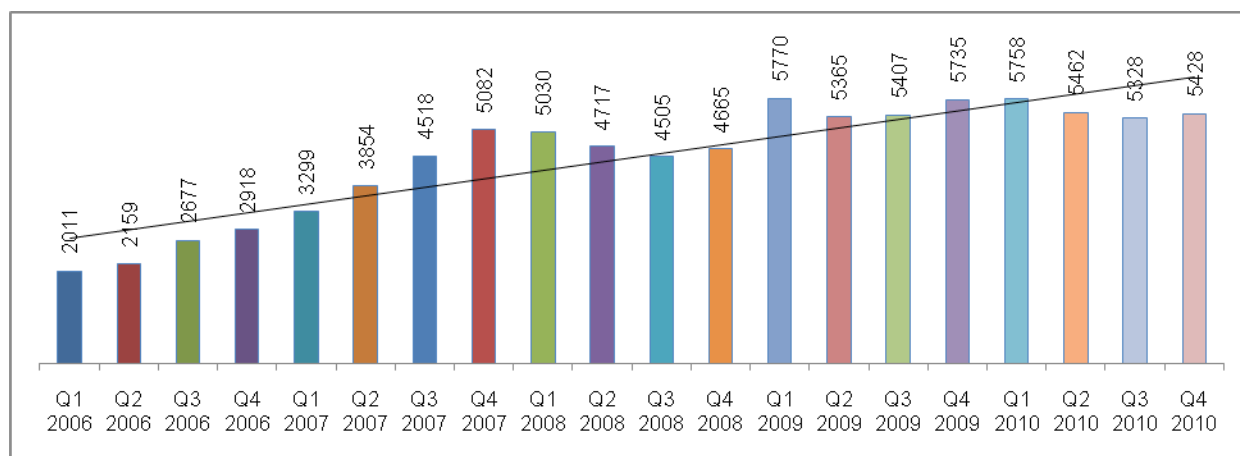

circles. God willing, when the number of participants in study circles increases significantly, the dynamics created within the community will attract many more to this mode of learning.

Currently there are about 950 study circles with an average of 6 participants in each study circle. Of the total participants, 48% are from the wider community, while the remaining 52% are from the Baha'i community. The following two charts illustrate the development of study circles in India since the beginning of the second Five Year Plan:

NUMBER OF STUDY CIRCLES

ATTENDANCE IN STUDY CIRCLES

Overview of devotional meetings.

As the Supreme Body mentioned, the *“spirit of communal worship generated by devotional meetings begins to permeate the community’s collective endeavors.”* In India, devotional meetings involve a high number of Baha'is compared to the other core activities and these are established and sustained with relative ease.

From available reports, devotional meetings are being held in about 4541 homes with a degree of regularity and with an average of 6 participants in each devotional. Of the total participants of devotional meetings, 61% are from the Baha'i community, while the remaining 39% are from the wider society. While Baha'i

communities across the country are striving to steadily multiply the number of devotional meetings with greater number of people from the wider society, efforts are also being made to constantly improve the quality and regularity of this activity. The following two charts illustrate the development of devotional meetings in India since the beginning of the second Five Year Plan:
